Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 49 contings. The true order of the pieces
is not known and their order in this sequence record is
                                                                   arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                      length

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chemistry: Dye-terminator Big Dye: 100% of reads Assembly program: Phrap: version 0.990329 Consensus quality: 185950 bases at least Q40 Consensus quality: 193052 bases at least Q20 Consensus quality: 193076 bases at least Q20

On May 25, 2002 this sequence version replaced gi:21213601.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality) -

as compressions and repeats; all regions were ocvered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following

abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Ems. EMBL: Sw.;

SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP

database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-161B3 is

from the RPCI-23 Mouse PAC Library

constructed by the group of Pieter de Jong.

                               Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation.
                                                                                                                                                                                          120
                                                                                                                                                                                                                           180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGE). Products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and disorders, skin disorders, haematopolesis-related disorders, tissue-growth disorders, bone-related disorders und other wounds, connective tissue disorders, burns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, acception of the connective tissue disorders, and inclaimmatory, and incisions and other wounds, connective tissue disorders, and inclaimmatory, and incisions and other wounds, and inclaimmatory, and incisions and other wounds, inclaims and incipations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        can be used in the production of transgenic or knock-out animals.
Antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                anglogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products
WNT-1 induced secreted protein; WISP-1; WISP-2; WISP-3; CTGF; tumour; connective tissue growth factor; cancer; melanoma; arteriosclerosis; leukaemia; lymphoid malignancy; heematopolesis-related disorder; tissue-growth disorder; skin disorder; desmoplasia; fibrotic lesion; kidney disorder; bone-related disorder; ostoporosis; trauma; burn; connective tissue disorder; catabolic state; inflammation; testicular-related disorder; anglogenesis; immunological disorder; ss.

Nucleic acid sequences encoding rat heparin-induced CCN-like protein, used in methods to identify modulators or in diagnostic applications -		The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP inclosic and HICP antishadise	can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity	or expression. Probes capable of hybridizing to HICP MRNA or antibodies specific for HICP can be used to detect HICP can be used to treat disorders, such as a cardiovascular or sample. HICP can be used to treat disorders, such as a cardiovascular or

                                                                                                                                                                                                                                                                                                                                                     protein. Agents that stimulate or inhibit HICP protein activity or can be used to modulate cell-associated activity. HICP modulate cell-associated activity. HICP modulators can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic disorder, characterized by aberrant cell proliferation. The present sequence represents the coding sequence of rat HICP mature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GACTGCCCACGCCCCAAGAGAATACAGGTGCCAGGAAAGTGCTGCCCCGAGTGGGTATGT 737

The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). Products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and blastocoelic disorders, haematopolesis-related disorders tissue-growth disorders, skin disorders, desmoplasia, fibrotic lesions, kidney duisorders, bone-related disorders such as osteoporosis, trauma such as burns, incisions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory,
                                                                                                                                                                                                                                                                                                                                                                                                                       connective tissue growth factor; cancer; melanoma; arterioscierosis; leukaemia; lymphoid malignancy; haematopoiesis-related disorder: tissue-growth disorder; skin disorder; desmoplasia; flbrotic lesion; kidney disorder; bone-related disorder; osteoporosis; trauma; burn; connective tissue disorder; catabolic state; inflammation; testicular-related disorder; anglogenesis; immunological disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes human growth tactor (CTGF) and fisp-12, which has homology to connective tissue growth factor (PDGF) which are members of the platelet-derived growth factor (PDGF) superfamily of growth factors. Antisense oligonucleotides and HGFLP antagonists can be used to treat or prevent cancer, and connective tissue discorders including ankylosing spondylitis, atherosclerosis, Dupuytren's contracture, eosinophilic fascifitis, Pelty syndrome, Goodpasture's disease, Hunter syndrome, Hurler syndrome, keloids, Marfan syndrome, nodular fascilitis, osteogenesis imperfecta, polyarthritis and restenosis following angioplasty. HGFLP antibodies and polynucleotides can also be used in diagnostic assays for conditions or diseases characterised by GRFLP expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       226

The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are cused to prevent, treat or ameliorate a medical condition in e.g. humans, also be used in diagnosting a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme clinked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, byperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and coular disorders e.g. corneal infection. The polypeptides can also be used at always and in chemotaxis. The polypeptides can also be used as a food additive or chemotaxis. The polypeptides can also be used as a food additive or sequence represents a human secreted protein encoding cDNA.

The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard encoding them. The secreted proteins and polynucleotides are tecombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme clinked immunosorbend assays (ELISA). Disorders which are diagnosed or treated include autojmmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, serbovascular disorders e.g. cardiac arrest, serbovascular disorders e.g. cardiac arrest, oreneovascular disorders e.g. cardiac arrest, oreneovascular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, chemotaxis. The polypeptides can also be used as a food additive or present preservative to increase or decrease storage capabilities. The present

PRO261 is a growth factor. The invention relates to isolated antibodies which bind to a polypeptide. The "PRO" polypeptides are encoded by genes which are over expressed in the genome of tumour cells. Vectors and host cells comprising the nucleic acid encoding the antibodies are used in the production of the antibodies. The antibodies and nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody; PRO187; PRO533; PRO214; PRO240; PRO211; PRO230; PRO261; PRO246; PRO317; Unmour growth inhibitor; cancer; diagnosis; treatment; human; cell growth; proliferation; growth factor; ADEPT; antibody dependent enzyme mediated prodrug therapy; ss.

them are used for diagnosing a tumou: in a mammal. The antibodies are used for inhibiting the growth of tumour cells and identifying compounds that inhibit a biological or immunological activity of and/or expression of a PRO187, PRO513, PRO214, PRO211, PRO211, PRO520, PRO351, PRO246, or PRO317 polypeptide. The antibody can be used in antibody dependent enzyme mediated prodrug therapy (ADEPT) by conjugating the antibody to a prodrug-activating enzyme which converts a prodrug to an anti-cancer drug. The antibodies can be fluorescently labelled and monitored by light microscopy, flow cytometry or fluorimetry for diagnosis and prognosis of

PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bloactive molecules to cells expressing PRO polypeptides, to modulate blological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expressing in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor and properties are also useful to stimulate the release of tumour necrosis factor and properties are also useful to stimulate the release of tumour necrosis factor are also useful to stimulate the release of cartilage, the proliferation of chondrocytes, the proliferation of chondrocytes, the proliferation of inner ear utricular supporting cells of artilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCS), or the proliferation of endothellal cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptides confector VIIA. The ERO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to PRO proteins and coding sequences. The present sequence is the coding sequence for one such PRO protein. It was found that the PRO genes are amplified in the genome of tumour cells. The gene amplification is expected to be associated with the overexpression of the gene product and contributes to tumourigenesis. Therefore, antagonists of PRO proteins are useful for the treatment of benign or malignant tumours, leukaemias, lymphoid malignancies and other disorders such as neuronal, alial, astrocytal, hypothalamic, glandular, epithelial, inflammatory and immunologic disorders.

The invention relates to novel human anglogenesis-associated proteins designated PRO proteins (AAB53064-B53097), and to nucleic acids encoding PRO proteins. The invention also relates to vectors and host cells comprising a PRO nucleic acid, the recombinant production of a PRO protein, agonists or antagonists of a PRO protein, agonists or antagonists of a PRO protein, additionally encompasses methods of identifying modulators of PRO expression or activity; diagnosing a cardiovascular, endothelial or additionally encompasses methods of identifying modulators of PRO expression or activity; diagnosing a cardiovascular, endothelial or adjogenic disorder, or the expression level of a PRO gene within a PRO gene, treating a cardiovascular, endothelial or angiogenic disorder via the administration of a PRO protein, PRO nucleic acid, or PRO nucleic acid; and methods of inhibiting or stimulating endothelial or and methods of inhibiting or stimulating endothelial or and methods of inhibiting or stimulating endothelial cell growth, cardiac hypertrophy or PRO-induced angiogenesis via the administration of a PRO protein, or an agonist or antagonist thereof. PRO nucleic acids, PRO protein, or an agonist or antagonist thereof. PRO nucleic acids, PRO proteins, antibodies against PRO proteins, productions and production of a PRO protein, and production of a produced angiogenic disorders, such as atherosclerosis, osteoporosis, myocardial infarction, hypertension, atherosclerosis, osteoporosis, myocardial infarction, hypertension, endometricosis, ulcers, wounds, cancer, Alabrimer's disease, funtington's endometricosis, ulcers, wounds, cancer, Alabrimer's disease, psoriasis, endometricosis, ulcers, wounds, cancer, Alabrimer's disease, psoriasis, endometricosis, ulcers, wounds, cancer, Alabrimer's disease, psoriasis, corceen libraries to isolate cDNAs with sequence identity to PRO proteins, to map genes encoding PRO proteins, to enadype genetit thereof to screen libraries to isolate cDNAs with sequence intentity to PRO proteins, of g

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This nucleotide sequence codes for human connective tissue growth factor superfamily. It was discovered in a cDNA library dervor director superfamily. It was discovered in a cDNA library derived from human osteoblasts. The gene has also been identified in cDNA libraries from ovary, testis, heart, lung, skeletal muscle, adrenal medulla, adrenal cortex, thymus, prostate, small intestine and colon. A cDNA clone is deposited as ATCC 97756. Also provided are vectors, host cells and recombinant methods for producing croffs-3 polypeptides. CTGF-3 nucleic acid sequences or their fragments, e.g. primers or probes, can be used to diagnose diseases where CTGF-3 expression is enhanced, e.g. cancer, arthritis, throsis or atherosclerosis, or diseases where expression is decreased such as in osteoporosis. Discorders characterised by decreased or increased levels of CTGF-3 can be treated by administering CTGF-3 polypeptides and anti-CTGF-3 antibodies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF).

Products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, leavaemia and lymphoid malignancies, neuronal, glial, astrocytal, and purpothalamic and other glandular, marcophagal, epithelial, stromal, and blastocoelic disorders, haematopoissis-related disorders, tissue-growth disorders, bone-related disorders seconds, connective tissue disorders, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, catabolic states, testicular-related disorders, and inflammatory, catabolic states, testicular-related disorders, and inflammatory, catabolic such immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of an bused in the products can be used for detection and diagnosis especially of an bused in the products.

The specification describes a pharmaceutical composition, comprising a growth factor, an inhibitor agent, i.e. a protease. The inhibitor agent, i.e. a protease. The inhibitor agent, i.e. a protease. The inhibitor agent, i.e. a protease, that is upregulated in a damaged tissue such as a wound environment. Growth factors which are included in the composition of the invention are platelet-derived growth factor (PDGF), fibroblast growth factor (FGF), connective tissue derived growth factor (CGF), transforming growth factor (KGF), transforming growth factor (KGF), transforming growth factor (KGF), vascular endothelial growth factor (KGF), wascular endothelial growth composition of the invention include inhibitors of urokinase-type plasminogen activator (UPA) and matrix metalloproteinase (MMP). The composition is useful for the treatment of chronic damaged tissue, i.e. wounds and dermal ulcers. The present sequence encodes a human corrective to the composition of the
                                                                                                                                                   Composition for the treatment of damaged tissue i.e. chronic wounds and dermal ulcers comprises an inhibitor agent i.e. a protease and a growth
